

Learning Progress

I did not learn anything new from this section because I was already familiar with the topics covered. I mainly used this section to review and refresh my existing knowledge.

Small Project – Thruster Class Drill

The project was a simple C++ OOP exercise focused on creating a `Thruster` class and separating its declaration from its implementation.

The project was divided into three files:

- `Thruster.hpp` — contains the class declaration and public methods.
- `Thruster.cpp` — contains the implementation of the class methods.
- `main.cpp` — creates a `Thruster` object and tests its functions.

The class includes methods such as `setSpeed()`, `getSpeed()`, and `getStatus()`. The project was mainly used as a quick review of C++ classes, encapsulation, constructors, and `.hpp` / `.cpp` file separation.
